About Hoarding by **Lomax**

About the Company

Hoarding by Lomax provides professional hoarding systems, temporary partitions, and graphics solutions for shopping centres, retail developments, airports, and commercial construction projects. Our systems are designed to create safe and secure construction zones while maintaining the high visual standards required in modern retail environments.

We offer both modular freestanding hoarding systems and traditional gypsum board hoarding, allowing us to provide flexible solutions for different project requirements.

Hoarding by Lomax supports major retail developments including projects within Emaar Malls, delivering professional hoarding systems and graphics solutions for retail construction environments.

Our team combines engineering knowledge, installation experience, and high-quality graphics production to deliver reliable hoarding solutions across a wide range of projects.

Our **Vision**

To become a leading provider of hoarding and construction screening solutions across the Middle East.

Our **Mission**

To deliver safe, innovative, and professional hoarding systems that support construction projects while maintaining the appearance and safety of public environments.

Our **Values**

Modular Freestanding Hoarding

The Lomax System is a structurally engineered modular hoarding system designed for indoor and outdoor construction environments. This system allows hoarding to be installed without fixing into floors or ceilings, making it ideal for shopping centres and premium retail environments.

LOMAX™ SYSTEM FEATURES

MODULAR HOARDING AND FENCING SOLUTIONS
COMPACT | REUSABLE | FREESTANDING

Interconnecting shape
– specifically designed to restrict movement in any direction when stacked

Easy to carry handles

Stud recess – a standard 4x2 MPG 10 timber (non-ribbed) stud freely inserts into the recess

Metal plates
cleverly support the pine stud and secure it in place

It's compact – At only 46cm deep as a single stack of weights, it's the narrowest free-standing system available

Supports cross bracing
so the hoarding won't 'snake' out of position once it's installed

Angled brick design
allows fence posts to have a 90 degree angle for corners

It's free-standing – no fixings required to anything for indoor or outdoor applications

Support post readily inserts into post holes to create a high fulcrum point offering enhanced stability

32mm OD fence post holes means it can be used for both hoarding and fencing, as one multi-tasking solution

- Completely freestanding system
- No drilling or fixing to floors or ceilings
- No damage to mall property
- Fast installation and removal
- Strong weighted base system for stability
- Modular panels for different layouts
- Clean professional appearance

This system is widely used in shopping centres where safety and property protection are critical.

Gypsum Board Hoarding

Gypsum board hoarding is a traditional temporary wall system built using a metal frame and gypsum boards. The system is fixed to the ceiling structure or base building structure to provide stability and strength.

It is commonly used for shop fit-outs and renovation works in shopping malls, offices, and commercial buildings.

- Smooth surface suitable for paint or graphics
- Fire-resistant board options available
- Helps reduce noise and dust
- Custom sizes and layouts available
- Strong solid wall construction

This type of hoarding creates a secure temporary wall that separates construction areas from public spaces.

Graphics & Printing Solutions

Construction hoarding can also become a powerful branding opportunity. Hoarding by Lomax provides complete large-format printing and graphics installation as part of our hoarding services.

High-quality graphics transform hoarding walls into attractive branded displays while maintaining a professional environment during construction works

Our Graphics Services Include:

- Retail branding graphics
- Advertising displays
- Wayfinding signage
- Project branding graphics
- Promotional displays

Drywall Partitions

Drywall partitions are lightweight non-load-bearing walls used for interior construction projects.

Benefits

- Retail units
- Office spaces
- Temporary rooms
- Construction site offices

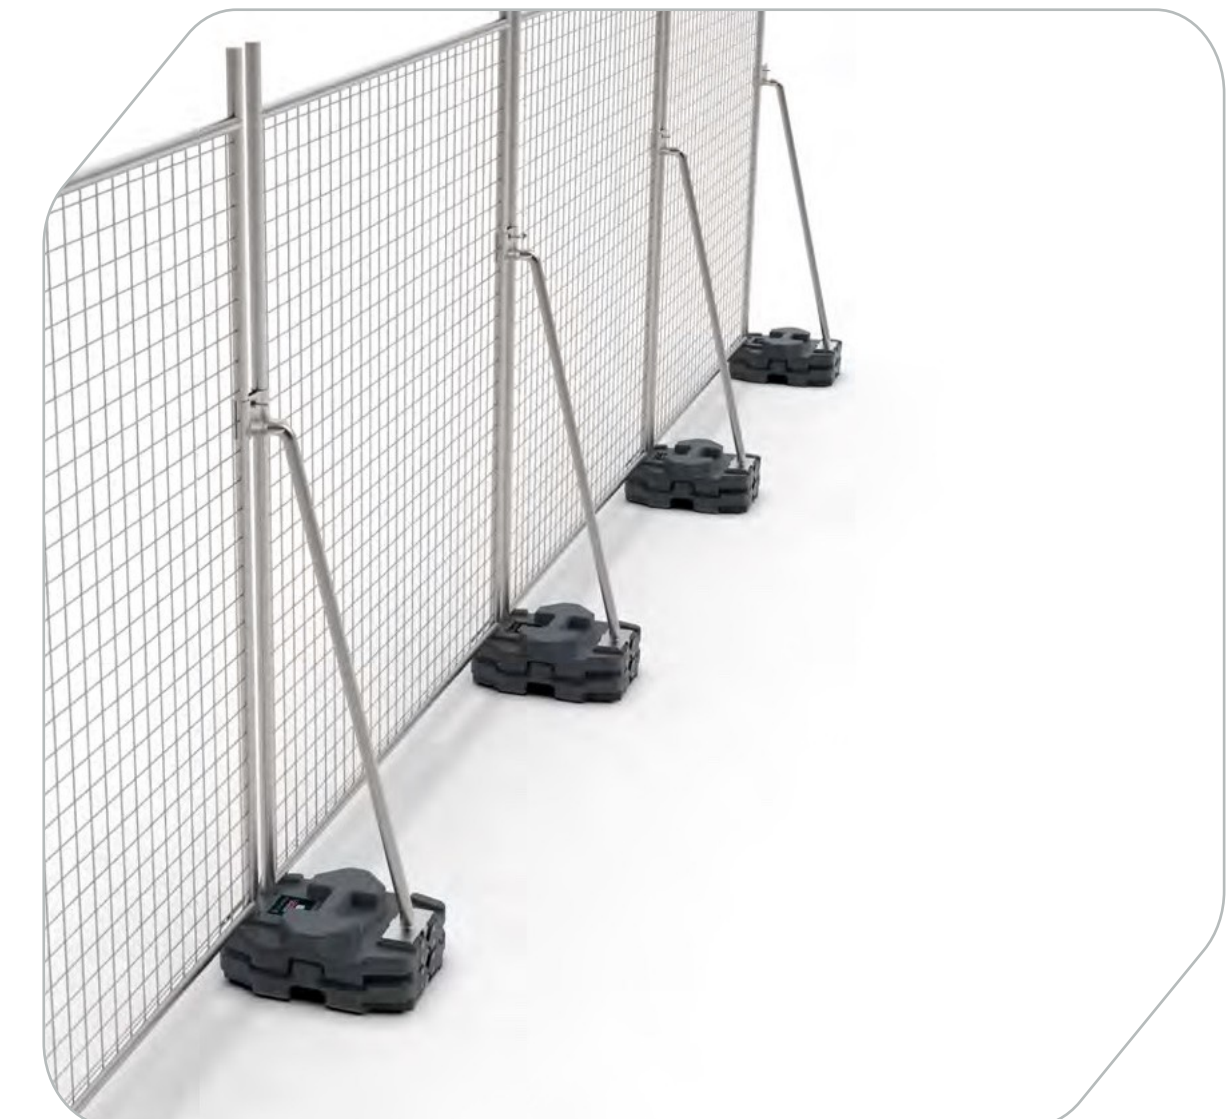

External Hoarding & Fencing

External hoarding and fencing systems are used to secure outdoor construction areas and protect the public. These systems help control access to construction zones while improving safety around development sites.

Applications

- Construction sites
- Development projects
- Public areas
- Event sites

External hoarding can also be used for branding and project information displays.

Installation Services

Our experienced installation team ensures that every hoarding system is installed safely and efficiently.

- Site inspection and planning
- Professional hoarding installation
- Graphics installation
- Maintenance and removal

Our team is experienced in working inside active shopping centres and commercial environments while maintaining strict safety standards.

Safety Commitment

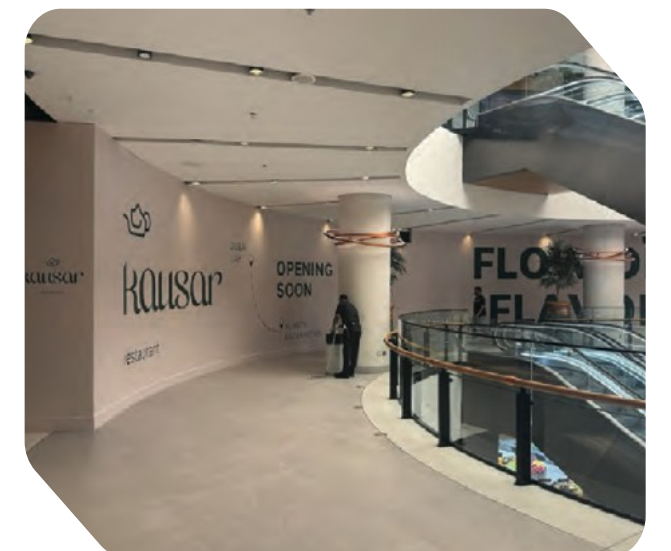

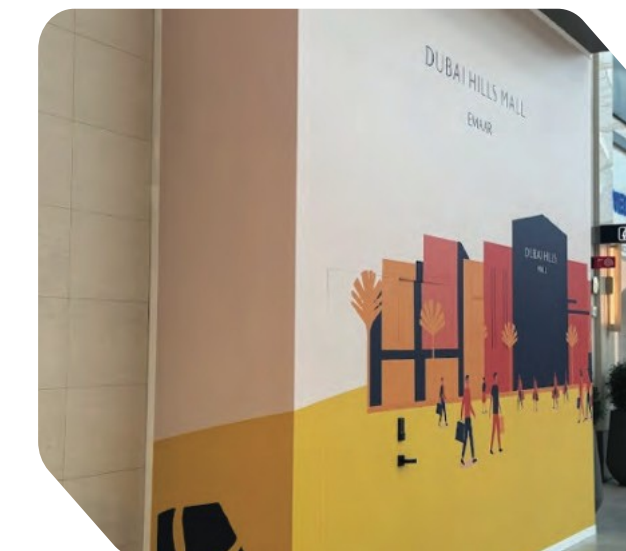

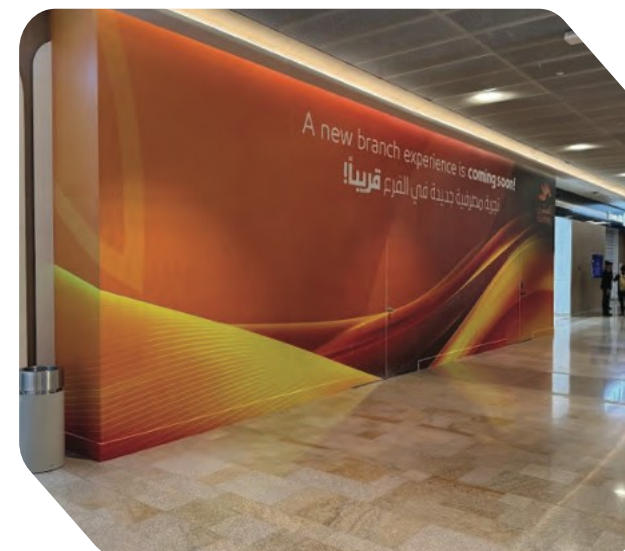

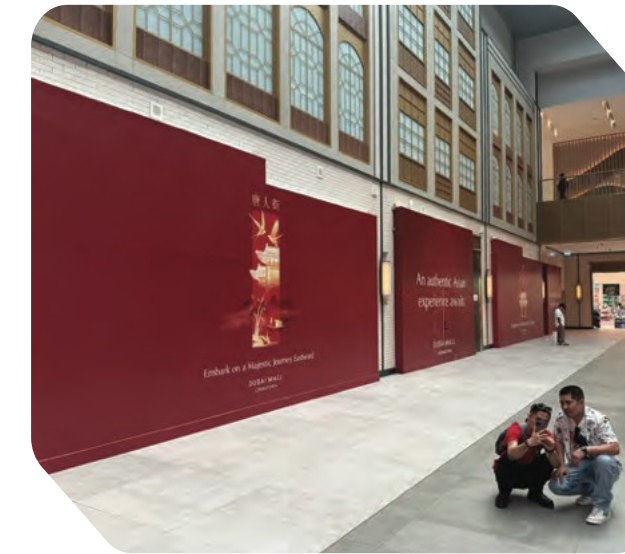

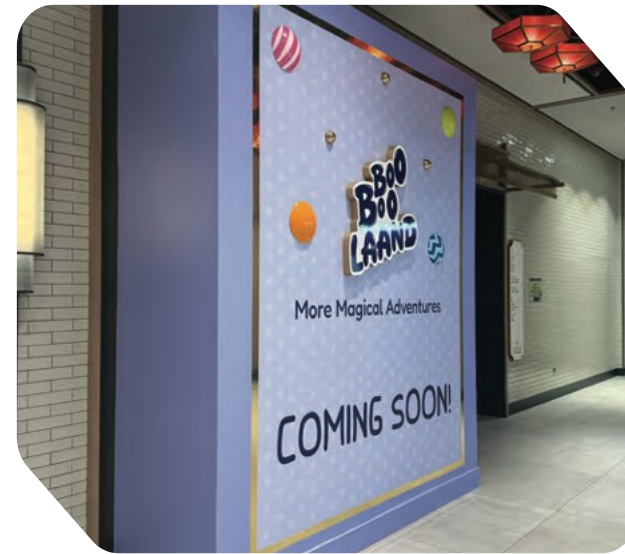

Safety is a priority in every project we deliver. Our hoarding systems are designed to create safe and secure construction zones while protecting visitors, workers, and surrounding property.

We Follow Strict Safety Procedures To Ensure:

- Secure hoarding installations
- Stable structures
- Safe working environments
- Protection of public areas
